1. THE INNOVATION FOR DEFENCE PRIZES

1.1. OBJECTIVES PURSUED

Through this contest the European Defence Agency (EDA) aims to stimulate engagement of non-traditional defence R&T communities and innovators¹ in order to speed access to emerging and potentially disruptive research and if possible to identify areas in which additional investment is needed to fully address future defence capability needs.

The objective of the contest is to provide monetary reward to innovative defence-related ideas in support of military operations which could be in the future implemented through a collaborative R&T effort.

It is expected that the prize will stimulate involvement of innovative industrial and research entities within the EDA R&T framework and will contribute to the generation of new defence research projects by exploiting all the possible defence research funding instruments.

The contest will also provide a good opportunity to small and medium sized enterprise, research organization and universities, non-traditionally involved in defence R&D activities to demonstrate their know-how, maximize dual-use synergies and to form valuable partnerships with key players in the defence field.

Internet of things (IoT), the extension of internet connections beyond computers and communication system to everyday objects, and its myriad of applications, is nowadays driving more and more innovation and engaging even the most traditional business. At the same time the 5th generation of wireless system communications (5G) is coming and most experts agree on that it will revolutionize day-to-day life as the 3G did.

¹ Albeit no defence specific expertise and/or background is required to participate to the contest, participation from entities already involved in defence related activities are not excluded.

Civil applications and commercial producers are the main drivers of the IoT and 5G technological (r)evolution, but defence cannot remain transparent to the benefit that these technology and any combination of them can bring to the military arena.

This innovation prize will therefore reward innovative defence-related ideas addressing the following topic: **Innovative Defence Applications using 5G and IoT.**

The prize winners are expected to propose ideas or concepts which would, if implemented between now and 2035 and beyond, contribute to improve and enhance specific EU defence capabilities.

1.2.REQUIREMENTS

Applications must be original ideas from applicants. They may propose new or improved ways to implement existing solutions, combine them, or adapt them to a different context, application or matched to a specific military scenario, but they cannot be exact copies of those.

The applicants must demonstrate the novelty of their solution, in comparison with those already used/implemented or developed by themselves or by others in other contexts.

The applicants are also expected to indicate how the participation in the contest may benefit their idea (e.g. prize, mentoring, networking, visibility or other related benefit).

The proposed ideas need to be innovative, implementable through a collaborative project, and affordable in development and exploitation.

Ideas shall be related with the prize topic (section 1.1) and might include, but are not limited to:

- Proposal of development of new technologies and techniques;
- Creation of new engineering processes, operational doctrine, services and capabilities;
- Application and/or adaptation of existing technologies to a different problem or domain.

1.3.AMOUNT OF THE PRIZE

EDA will award one prize to the best idea according to the award criteria set out below, with a value of 30,000€. In addition, EDA will cover the travel, accommodation and subsistence expenses at least for the winner to attend the award ceremony for an amount of up to 1,500€ (one representative) in line with Annex 4.3. The prize will be funded under the European Defence Agency Operational Budget.

1.4.ADDITIONAL BENEFITS

The contest has been conceived to offer more than the financial prize. In particular, other incentives will include:

- The winner will have the possibility to promote its idea through a dedicated article in one of the issues of the EDA magazine (Defence Matters);
- The final award ceremony will be delivered in a formal EDA ceremony with press release coverage;
- The full Innovation prize will receive significant coverage in the EDA website and social medias (the name of the finalists and the winners will be published on EDA channels);
- The prize winner/finalists will be given access to the EDA network of experts, having the opportunity to form valuable partnerships to leverage on some of the EDA (e.g. the winner/finalist will be also provided with the opportunity to present the idea to the CapTech for potential implementation through a MS funded Cat A or Cat B Project) and EU R&T funding opportunities;

2. THE PROCEDURE
